TECHNICAL INSTRUCTIONS

PACKING LIST

CARGOSAFETY.COM.BR

Technical Instructions consist of the preparation and issuance of formal guidelines that regulate the execution of specific logistics and port operations, ensuring that all stages are carried out in compliance with safety standards, international engineering standards, and contractual requirements.

This service includes the definition of operational procedures, mooring criteria, handling, packaging analysis and symbology, and equipment specifications, as well as recommendations for handling and transportation. It is based on guidelines from the International Maritime Organization (IMO), ISO standards, ABNT standards, and criteria from classification societies such as DNV and Lloyd's Register. The instructions may cover general cargo operations, industrial projects, and heavy-lift cargo (offshore and onshore), providing the client with validated technical guidance from qualified professionals to ensure safe and traceable execution. For contractors, this service represents risk mitigation, standardization of procedures, reduction of operational failures, and compliance with the requirements of insurers and port authorities.

By conducting the preparation of Technical Instructions, logistics operators, shippers, and cargo handlers can rely on formal technical support that ensures greater efficiency, safety, and reliability throughout all stages of the logistics chain.

Technical instructions for equipment operators
on the correct handling of goods.

Alignment with the parties involved in the
operations for instructions on safety standards.
