DISCHARGE SURVEY

CARGOSAFETY.COM.BR

DISCHARGE SURVEY

The discharge survey and specialized technical monitoring of cargo unloading operations on board vessels when berthed at port terminals, inland ports, or Destination ports, ensuring that the entire process occurs in accordance with international transport standards, safety, and integrity of the goods.

During the activity, the surveyor verifies that the unloading procedures are aligned with the contractual documentation (Bill of Lading, packing list, and manifests). They inspect the physical condition of the cargo upon arrival and record photographic evidence that confirms its integrity or any damage before or during the operation.

The performance follows guidelines from organizations such as the International Maritime Organization (IMO), by PSO and the ABNT standards, and classification societies such as DNV and Lloyd's Register, ensuring traceability and credibility of the reports issued. For the client, this service represents the mitigation of logistical risks, the reduction of commercial disputes, support for customs processes, and the preservation of asset values, since any damage or discrepancies can be detected and reported immediately and independently.

By conducting the discharge monitoring services, shippers, shipowners, importers, and logistics operators benefit from an impartial assessment capable of ensuring greater operational safety and technical and legal support at all stages of goods reception.

DISCHARGE SURVEY

Onboard monitoring of cargo handling to verify current conditions.

Analysis of the materials and equipment used for safe unloading.
